Philopateerosama

Summary

Computer Science student specializing in Cybersecurity, Red Teaming, and Penetration Testing. Proficient in Python and C++ with hands-on training in network security and offensive security methodologies. Experienced in competitive programming, optimizing algorithmic efficiency under strict execution limits. Seeking an entry-level role or internship to leverage technical skills in identifying vulnerabilities and contributing to robust security postures.

Education

Sep 2023–Jun 2027 **Bachelor of Science in Computer Science**, *Egyptian Chinese University (ECU)*, Cairo, Egypt
Expected Graduation: June 2027.

Experience & Internships

Aug 2026–Present **Cybersecurity Trainee**, *Misr for Central Clearing, Depository and Registry (MCDR)*, Cairo, Egypt

- Participating in an intensive 160-hour (4-week) cybersecurity training program, emphasizing Security Operations Center (SOC) fundamentals and incident response workflows.
- Gaining theoretical knowledge and practical exposure to network monitoring, analyzing over 5 types of simulated network threats using log analysis techniques.

Jul 2025–Aug 2025 **Software Developer Intern**, *HITS Solutions*, Cairo, Egypt

- Completed a comprehensive 160-hour (4-week) software development program, geared toward applied coding practices and system architecture.
- Collaborated with developers to debug code and implement 3 new software modules, improving application stability and workflow efficiency by 15%.

Projects & Achievements

Aug 2026–Present **LabyrinthAI (Active Defense System)**, *Graduation Project (In Progress)*

- Researching and architecting an intelligent active defense system, aiming to integrate digital twin technology and reinforcement learning for advanced threat detection.
- Developing foundational modules for LLM-based data generation to simulate 100+ attack scenarios and ensure secure incident tracking.

Jan 2025–May 2025 **El-Lamma () Multiplayer Game**, *Mobile App Development*

- Built and deployed a cross-platform Android multiplayer card game using Flutter and Firebase, handling real-time state for up to 4 concurrent players per session.
- Implemented secure user authentication and real-time database synchronization to maintain 99% uptime during user sessions.

Jul 2024–Sep 2024 **Interactive Web Portfolio**, *Personal Project*

- Developed and deployed 3 responsive web applications using HTML, CSS, and JavaScript.
- Achieved a 20% improvement in user interaction metrics through optimized front-end performance and intuitive design patterns (Available on GitHub).

Feb 2024–Jun 2024 **Autonomous Firefighting Robot**, *Embedded Systems Project*

- Designed and implemented a control algorithm for a fire-fighting robot, enhancing fire detection accuracy by 40%.
- Improved emergency response capabilities by 25% through optimized sensor integration and real-time microcontroller logic.

- Oct **ICPC Competitive Programming, ECU Team Member**
- 2023–Mar 2024
 - Solved over 50 complex algorithmic problems using C++, utilizing data structures and reducing time/space complexity by up to 50% in targeted challenges.
 - Developed robust code under strict 2-hour time constraints, demonstrating resilience and analytical execution in high-pressure environments.
- Nov 2023 **1st Place - Best Presentation, Robotics Championship**
 - Led the technical presentation of a custom-built robotic solution to a panel of judges, securing 1st place among 15+ competing teams.
 - Translated complex embedded systems engineering concepts into clear, accessible visual and verbal delivery for an audience of 50+ attendees.

Technical Skills

- Programming Python, C++, JavaScript, PHP, Dart
- Cybersecurity Network Security, SOC Analysis, Penetration Testing, Ethical Hacking, SIEM (Splunk), Nmap, Wireshark, Linux
- Web & Mobile HTML, CSS, Flutter, Firebase, Git, GitHub, Embedded Systems Basics

Courses & Certifications

- Jun 2026–Present **Red Teaming, Ethical Hacking, Bug Hunting & Penetration Test, Udemy**
Comprehensive 15+ hour training covering Linux, network attacks, and Active Directory hacking.
- May 2026–Present **100 Days of Code: Complete Python Pro Bootcamp, Udemy**
Advanced Python programming covering 100 daily projects, OOP, web development, and automation.
- Sep 2025 **Cyber Security Training, National Telecommunication Institute (NTI)**
90 hours of hands-on training in networking security, penetration testing basics, and ethical hacking.
- May 2025 **PHP Full Stack Professional, American Academy for Engineering Training**
Completed 40-hour program with an "Excellent" grade.
- Feb 2025 **Competitive Programming Training, ECU & Coach Academy**
50 hours of intensive training covering algorithmic logic, data structures, and algorithms.
- Oct 2021 **IC3 Internet & Computing Core Certification, Central Agency for Organization & Administration**
30-hour program completed with an "Excellent" grade.
